

COMPANY PROFILE

Company Profile

Rope Task are a UK based, full IRATA member rope access company, specialising in the provision of rope access and working at height contracting to the UK and worldwide.

Our specialist rope access services include:

Blasting and painting, industrial cleaning, installation of working platform nets, replacement of high level glazing, rigging and lifting, high level window cleaning, construction remedial work, site supervision and rescue services, installation and certification of fall protection systems, height safety training, height safety equipment supply, construction safety and safety equipment.

Our multi-skilled independently trained and assessed IRATA rope access technicians solve complex access problems from simply cleaning windows on a multi-storey building through to glazing installation, complex rigging and lifting services, working platform netting installation and electrical installations, where conventional methods have proved impractical or too expensive. Once ropes have been set up on a structure our technicians possess the capabilities to carry out a wide range of tasks.

Since our formation in 1998, Rope Task have successfully become a full member company of the Industrial Rope Access Trade Association (IRATA). With our emphasis on safety we have completed thousands of man-hours without a single injury. We are proud of our exemplary health and safety record and we are fully approved members of the Safe Contractor Scheme.

Our quality systems and safe work procedures insure that we work safely, quickly and effectively, minimising project costs as seen in our case study examples. All of our technicians have a vast amount of experience in industrial rope access and other work at height techniques. Through customer satisfaction and the ability to solve complex access problems Rope Task have become a much sort after rope access contractor in the UK and Europe.

Rope access

Rope access is a form of work positioning that allows experienced technicians to access work sites using methods originally derived from climbing and caving, these methods have been improved upon and implemented into the off-shore, construction and maintenance industries.

Rope access has an enviable safety record that most other sectors of the working at height industry cannot match. The Industrial Rope Access Trade Association (IRATA) assesses individual technicians and audits member companies, which allows the industry to share information, techniques and knowledge, which improves and builds on its excellent safety record.

A rope access technician always has attachments, each having an independent anchorage point.

When ropes support the worker, each of the worker's ropes will have a fail-safe descent and safety mechanism.

All secondary tools and equipment are attached by lanyards to the worker's harness.

A minimum of two technicians is required for any job.

All technicians are independently assessed.

Training includes rescue procedures.

All equipment is regularly inspected and maintained.

Codes of practice and working systems have been carefully refined over the years by the HSE and IRATA.

Rope Task are willing to offer advice and site visits to discuss your particular needs regarding all aspects of rope access and working at height.

Benefits of employing Rope Task Limited

- IRATA Full member company
- IRATA level 3 supervision on all sites
- Rapid installation and dismantling of rope access equipment
- All teams are trained in high access and technical rescue
- Considerable cost savings over alternative access methods
- Ability to solve awkward and troublesome access problems
- Fast and efficient service

Recent contracts

Hilton Hotel Manchester

Rope Task removed and replaced glazing panels with an average weight of 500kg from this 50 storey building. Using rope access techniques we were able to complete the replacement of over 20 glass elements.

Geotechnical - Containment Netting – Mullahglass Ireland

Due to new legislation, Mullahglass landfill site required the erection of 1000's of square metres of containment netting to enclose the whole landfill site to prevent birds entering and litter escaping. This inevitably required work at height as 30 to 50 metre towers and masts were required to hold 100's of metres of rigging cables, which held up the containment nets.

Access was also required along the rigging cables to attach and anchor all containment nets.

Rope Task supplied a team of highly experienced rope access technicians who assisted in the erection of towers and masts. Once this had been completed all cable rigging and tensioning was carried out by Rope Task personnel working at heights of up to 40m. Once all cables had been anchored and secured, containment nets were lifted and using specialist rope access techniques, operatives gained access along the 32mm steel cables and secured the containment nets.

Installation of fall protection system – Empress State Building – London

Rope Task designed, supplied and installed two fall protection systems at Empress State Building, London. These systems are to allow future safe access for window cleaners to level 30 of the building. Systems have been installed on two elevations using rope access techniques, as no other means of access was possible.

Completed fall protection safety line system.

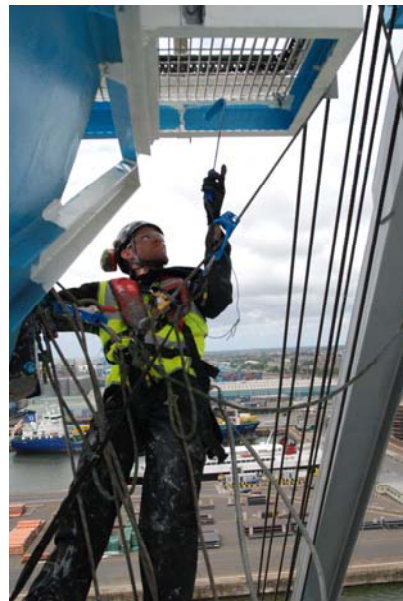

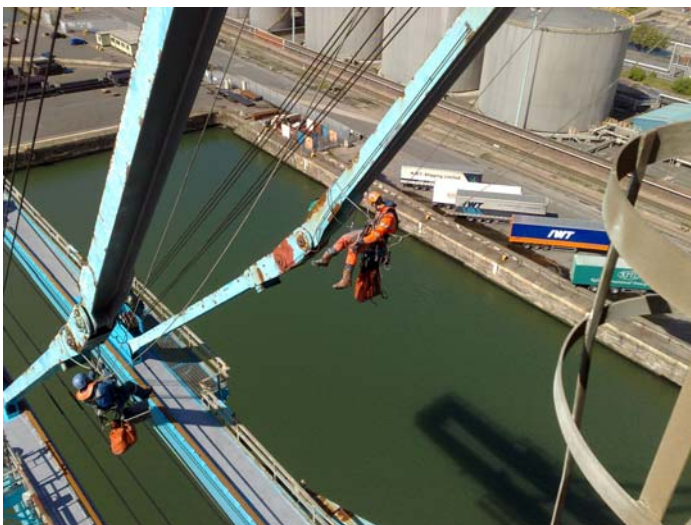

Conveyor Housing Replacement – Goodyear Site – Wolverhampton

Rope Task supplied operatives to remove and replace 70m high conveyor housing, plus additional supporting steelwork. This contract was completed without the use of cranes due to

the limited access around the structure. All lifting, removal and installation was carried out using rope access techniques.

Liverpool Bulk Terminal – Ship Unloader, blasting and painting services

Rope Task supplied blasters and painters to prepare and paint areas of the two ship unloaders at Liverpool Bulk Terminal. Conventional access was used to access most of the structure, but areas to the front of the ship unloaders and the main boom ties were completed using rope access techniques.

Services

Rope access support services
High level cleaning
Window cleaning using rope access techniques
Specialist atrium maintenance
Industrial Painting and Blasting using rope access and industrial climbing techniques
NDT Inspections
Rigging and installation of outdoor media and banners
Electrical installations
Confined space support services
Rigging & lifting
Construction remedial works
Water jetting
Equipment supply
Working at height, safety supervision and consultancy
Height safety training
Installation of temporary and permanent fall protection systems
